

POWERBI DASHBOARD ON SPACE MISSION DATA

INTRODUCTION

- Aim was to create a dashboard on space mission data where it enables everyone to gain insights by just visualizing the dashboard.
- After data mugging , cleaning and data modelling was done also I used various DAX functions for analysis.
- next was data visualisation part were powerbi was more easier to handle than any other visualisation software's
- majorly I had done 4 analysis on the data
- add filters and slicers to make the dashboard more user friendly

DATASET

dataset link: <https://www.mavenanalytics.io/data-playground?page=3&pageSize=5>

All space missions from 1957 to August 2022, including details on the location, date, and result of the launch, the company responsible, and the name, price, and status of the rocket used for the mission.

Feature Details:

- Company: Company responsible for the space mission
- Location: Location of the launch
- Date: Date of the launch
- Time: Time of the launch (UTC)
- Rocket: Name of the rocket used for the mission
- Mission: Name of the space mission (or missions)
- RocketStatus: Status of the rocket as of August 2022 (Active or Inactive)
- Price: Cost of the rocket in millions of US dollars
- MissionStatus: Status of the mission (Success, Failure, Partial Failure, Prelaunch Failure)

ANALYSIS

- Has mission success rate increased?
- Which countries have had the most successful space missions? Has it always been that way?
- Which rocket has been used for the most space missions? Is it still active?
- Are there any patterns you can notice with the locations?

Process

- 1. Importing data**
Downloaded the dataset which was on csv format to powerbi and transformed
- 2. Data Cleaning**
Cleaned the data by removing all null values and error
- 3. Data Modelling**
For representation of Star Schema Data is normalised
- 4. Dashboard Creation**
Different Charts where created for visualising the analysis and arranged on a dashboard.

Importing Data

- Space Missions data was in Csv format
- so imported text/csv file in powerbi
- after importing transformed the data for further process

space_missions.csv

Extract Table Using Examples | Load | Transform Data | Cancel

Data Cleaning

- Removed all Null Values
- Changed the data type
- performed basic math operations

Data Modelling

- Created duplicate Table
- Renamed, and removed unwanted columns, added indexing
- merged the Tables to the main Table to get a connection by respective ID's
- Created a Star Schema Representation of that
- Another one table was created by DAX

Queries [4] <    = Table.RenameColumns(#"Expanded Mission Details",{{"Mission Details.Mission Id", "Mission Id"}})

DAX FUNCTION

DATE TABLE

```
Date Table = ADDCOLUMNS(CALENDAR(MIN('Space Missions'[Date]),MAX('Space Missions'[Date])), "Year", YEAR([Date]), "Month", FORMAT([Date], "mmm"), "Month Number", MONTH([Date]))
```

Total Price

```
Total Price = SUM('Space Missions'[Price])
```

Total Missions

```
Total Missions = COUNT('Space Missions'[Mission])
```

Successful Mission

```
Sucessful Mission = CALCULATE(COUNT('Space Missions'[Mission]), 'Space Missions'[MissionStatus] = "Success")
```

Sucess Rate

```
Sucess Rate = DIVIDE([Sucessful Mission],[Total Missions])
```

Prelaunch Failure Mission

```
Prelaunch Failure = CALCULATE(COUNT('Space Missions'[MissionStatus]), 'Space Missions'[MissionStatus] = "Prelaunch Failure")
```

Partial Failure Mission

```
Partial Failure = CALCULATE(COUNT('Space Missions'[Mission]), 'Space Missions'[MissionStatus] = "Partial Failure" )
```

Failure Mission

```
Failed Mission = CALCULATE(COUNT('Space Missions'[Mission]), 'Space Missions'[MissionStatus] = "Failure")
```

CHARTS

Line Chart

Gives the details of Mission status of total missions over years

Clustered Bar Chart

Represents total missions by company

Cards

Key Performance Indicators on Mission statuses and prices

Clustered Bar Chart

Provide an idea about the total missions based on the rockets

Donut Chart

Total missions based on Mission status is represented

Scattered Plot

Chart was plotted based on Total Price and Total Mission added location in Values ,Mission Status and Successful Mission in legend and size respectively.

SPACE MISSIONS DASHBOARD

| | | | | | | |
|----------------|-------------|-------------|-------------------|-------------------|-----------------|----------------|
| Total Missions | Total Price | Sucess Rate | Sucessful Mission | Prelaunch Failure | Partial Failure | Failed Mission |
| 1K | \$162.30bn | 94.62% | 1K | 1 | 19 | 48 |

CONCLUSION

- Success rate is being fluctuating by years and the overall rate is 94.62%, in the year 2022 it was 97.47%.
- It can be observed that LC-394, Kennedy Space Centre, Florida, USA has the most successful space missions happened, even though it went through many downfalls.
- Falcon 9 Block 5 has been used for most of the space missions and it is still active.
- Based on location we can observe that most of the successful, failure, partial failure, prelaunch failure was happened in USA in different space centers.
